

GREEN TOILET

Lux

**COMPOSTING DRY TOILET
FOR INDOOR USE**

GREEN TOILET LUX – MODERN, RELIABLE AND ECOLOGICAL

Green Toilet Lux is a composting dry toilet designed and manufactured in Finland. It can fulfill all the requirements for a pleasant, easy-to-service indoor dry toilet at home or holiday home. Green Toilet Lux is assembled on two levels: the porcelain pedestal to the bathroom and the composting unit below floor to a cellar or outside. The service of Green Toilet Lux is based on the use of a spare container. When the active Green Toilet becomes full, it is replaced with the spare container. The full Green Toilet can decompose to ready mulch until it is time for the service again. Thus, there is no need to handle or shovel raw toilet waste.

*Easy & quick
maintenance*

*100%
odorless*

*Modern
& stylish*

*Everybody
knows
how to use*

*No visibility
to the waste*

*Durable
& reliable*

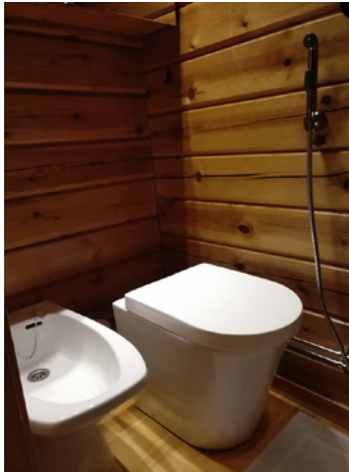

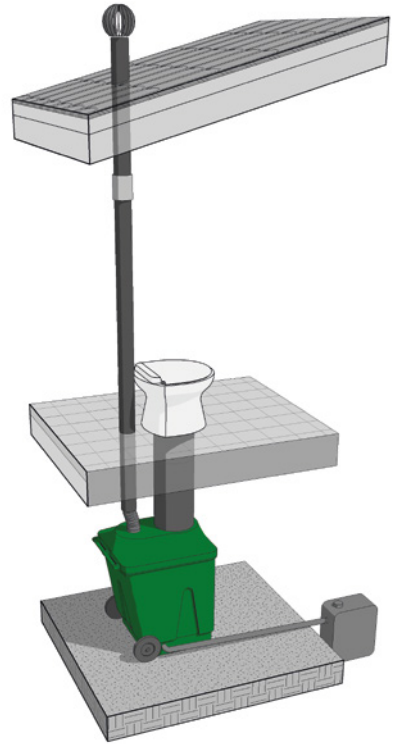

*Ecological &
low-energy*

USE AND MAINTENANCE

Green Toilet Lux is used just like a water closet, only there is no flushing. Bidet shower can be used, if it is available.

Green Toilet Lux can be taken into use in sites where there no water or electricity. However, if electricity is available, it is recommended to ensure the ventilation with an electrical duct fan.

The service intervals are long – normally several months. The change of a new container is easy, thanks to sturdy wheels. The capacity of the system can be scaled up endlessly with spare containers.

NOTES

Using dry toilet saves clean water and returns nutrients to the soil naturally!

OPTIONS

PORCELAIN PEDESTAL

- with urine separation
- non-separating

FAN

- electrical duct fan
- wind fan

GREEN TOILET COMPOSTING UNIT

- 120 l
- 330 l
